Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claims 1-10 are allowable over the prior art of record because the prior art of record does not teach or suggest the entire combination of elements of the web winding device set forth including an input gear; a motor side rotating body; at least one first coupling member which rotates about an axis of the input gear in conjunction with rotation of the motor side rotating body and is movable toward and away from teeth of the input gear in conjunction with rotation of the motor side rotating body one way about an axis thereof, the first coupling member meshing with the input gear by moving toward the teeth, transmitting the rotation the one way about the axis of the motor side rotating body to the input gear, and rotating the input gear in the winding direction; and at least one second coupling member which rotates about the axis of the input gear in conjunction with rotation of the motor side rotating body and is movable toward and away from teeth of the input gear in conjunction with rotation of the motor side rotating body the other way about the axis thereof, the second coupling member meshing with the input gear by moving toward the teeth, transmitting the rotation the other way about the axis of the motor side rotating body to the input gear, and rotating the input gear in the drawing out direction. None of the references of the prior art teach or suggest the operation of the first and second coupling device of the web winding device as advanced above and such do not provide the necessary motivation, absent applicant's specification, for modifying the web winding device in the manner required by the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
